# Minutes of the EURISOL Project Office meeting

November 13th, 2012

Participants: Y. Blumenfeld (YB), M. Lewitowicz (ML), P. Van Duppen (PVD), K. Turzó Non-participant: A. Facco (AF)

#### 1. Welcome

## 2. Summary and conclusions from the EURISOL week

Town meeting: high level of presentations. Interesting contribution of other projects. Rather low number of participants. Positive feedback about the synergy talks, although the contents were a bit disappointing for organizers.

Comments on the MoU:

- Lower the financial threshold
- Institutions did not received the document
- Enlarge the community beyond nuclear physics

PVD: It is important to define what to do on the EURISOL project in the coming 5 years.

The next town meeting should be in Orsay, jointly organised by IPNO and GANIL. According to the ENSAR workplan it should be in month 40 (Dec. 2013) but it seems more realistic to aim for March/April 2014.

### 3. Future actions (MoU, ENSAR2, ...)

#### MoU:

Modifications towards contributions in cash or in kind. COPIN is organising itself in order to participate.

#### ENSAR2

Message from the EURISOL PO: it is important to have a very visible EURISOL activity within ENSAR2.

PVD: it is essential to state very clearly to the community what are the options for EURISOL

• Suggestion from PVD: EURISOL should become a TNA (ISOL machines with post-acceleration?) in parallel to TNA on ECOS during ENSAR2. The organisation (beam time, travel reimbursements, etc) has to be carefully thought.

EURISOL TNA = GANIL + ISOLDE + INFN

Possibility of the participation of Polish labs and IFIN-HH (if it includes ELI)

- Another possibility is to define the goals of the network to enhance synergies between ISOL machines. Need to have a certain budget for workshops.
- YB: JRA's focused on R&D for EURISOL.

These ideas should be discussed only informally while it is not clearly defined yet. Discussion with Muhsin Harakeh at the occasion of ENSAR meetings in November.

EURISOL PO will organise meetings in order to define the EURISOL activities (JRA+NA?) within ENSAR2

A letter will be sent first to the ENSAR Work Package Leaders and afterwards to the community. This letter calls for ideas with a bottom-up approach. Deadline for new ideas: mid-April 2013.

EC consultation on RI's: expert report available by the end of February 2013.

ESFRI: no update of the list in the coming years

## 4. Membership of the PO

CERN is no longer represented. A fifth member could join the PO in order to represent CERN, for instance Maria Borge.

## 5. AOB & next meeting

Information about ENSAR reaction to send to PVD.

Next meeting: to be defined
